OPTIONS

Missing option numbers are not applicable for this product.

10. High-frequency stability reference
    - C. ±2 x 10^{-9}, 0 °C to 50 °C,
      1 x 10^{-9}/day typical (fixed temperature after 24 hours on time).
    - G. Self calibrating tracking reference with controlled slew rate. Internal reference tracks external reference and uses external reference to correct for aging of the internal reference. The internal reference changes frequency at a maximum rate of 0.06 ppm/second. When external reference is lost, the reference frequency is held at the previous value. Frequency stability on internal reference: ±5 x 10^{-8}, 0 °C to 50 °C, 1 x 10^{-9}/day typical (fixed temperature after 72 hours on time).
      5 x 10^{-8}/year typical
    - H. Self calibrating tracking reference with controlled slew rate. Internal reference tracks external reference and uses external reference to correct for aging of the internal reference. The internal reference changes frequency at a maximum rate of 0.06 ppm/second. When external reference is lost, the reference frequency is held at the previous value. Frequency stability on internal reference: ±2 x 10^{-9}, 0 °C to 50 °C, 1 x 10^{-9}/day typical (fixed temperature after 72 hours on time).
      5 x 10^{-8}/year typical
17. Remote control
    - C. RS-232

Note: For literature describing local control (front panel) and remote control (bus protocols), refer to Narda-MITEQ Technical Note 25T055.
